Full Stack Development

Mini E-Commerce Project
Lab Sheet 1 — Answer / Submission File
Building the Storefront (HTML + CSS)

Student Name	ABHIGYAN DUBEY
Program	B.Tech CSE, 5th Semester
CU ID	CU24250059
Course Code	BTCS303P
Assignment	AS01 — Project Phase 1 & Phase 2
Project Theme	OtakuVerse — Anime Merchandise & Webnovel Store
Repository	GitHub: https://github.com/cu24250059-pixel/Full_stack_BTCS303P
Pages Submitted	index.html, products.html, cart.html, checkout.html + style.css
Status	Completed — screenshots attached as proof of implementation

This document contains the completed lab sheet requirements along with live screenshots of the working storefront (Home, Products, Cart and Checkout pages) as submitted proof.

Requirement Checklist

Part A — HTML Structure (Phase 1)

- ✓ Project folder created with index.html, products.html, product-detail.html, cart.html, checkout.html
- ✓ Common <header> with store name/logo ("OtakuVerse") and <nav> with Home, Products, Cart, Checkout links on every page
- ✓ index.html includes a hero/banner section and a Featured Products section with placeholder product blocks
- ✓ products.html lists 8+ products in repeated blocks (image, name, price, Add to Cart button)
- ✓ product-detail.html shows full product details with larger image, description, price and quantity selector
- ✓ cart.html shows items in a table layout with quantity, unit price, subtotal and grand total
- ✓ checkout.html includes a form with Name, Address, City, Pincode, Phone and Payment Method fields, plus a Place Order button
- ✓ Common <footer> with contact info and copyright text on every page

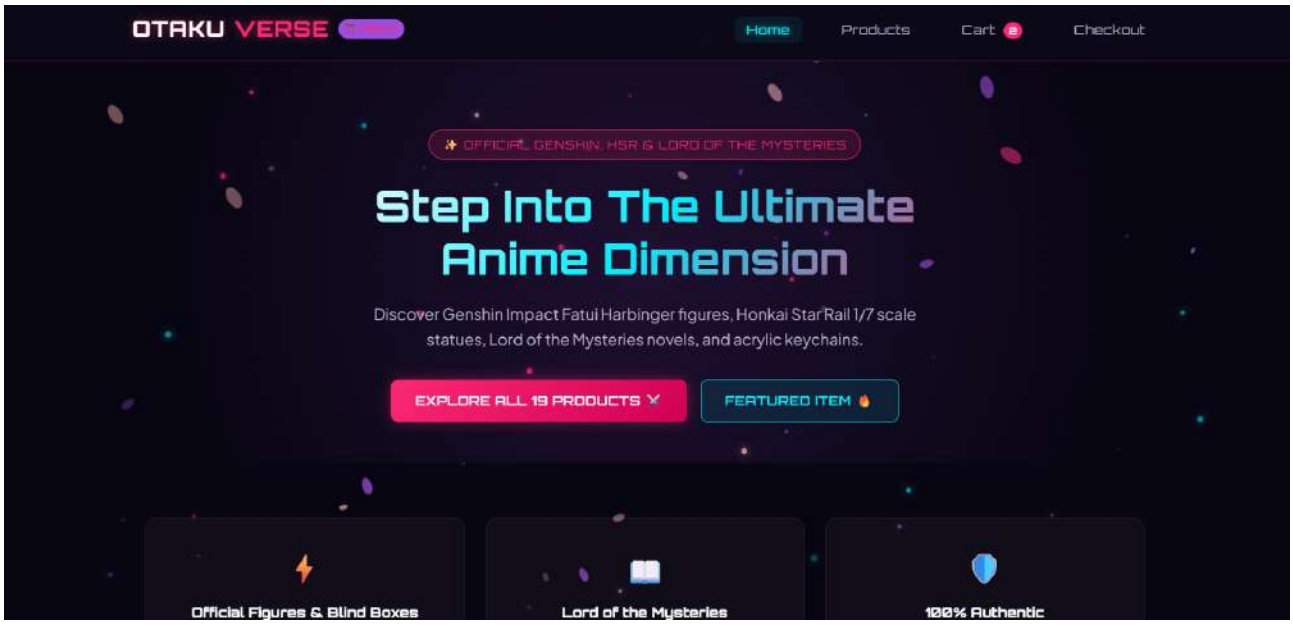

Part B — CSS Styling (Phase 2)

- ✓ style.css created and linked to all pages
- ✓ CSS custom properties defined for the color theme (neon pink/cyan on dark background)
- ✓ Navbar styled with Flexbox — links aligned horizontally with even spacing
- ✓ Product blocks styled as cards with padding, border and border-radius
- ✓ Product grid arranged responsively using Flexbox/Grid so cards wrap across the row
- ✓ Checkout form styled with consistent input sizing, padding, focus states and a hover-styled submit button
- ✓ Media query added so layout adapts to mobile-width screens
- ✓ Cart table and footer styled to match the overall theme

Live Output — Screenshots

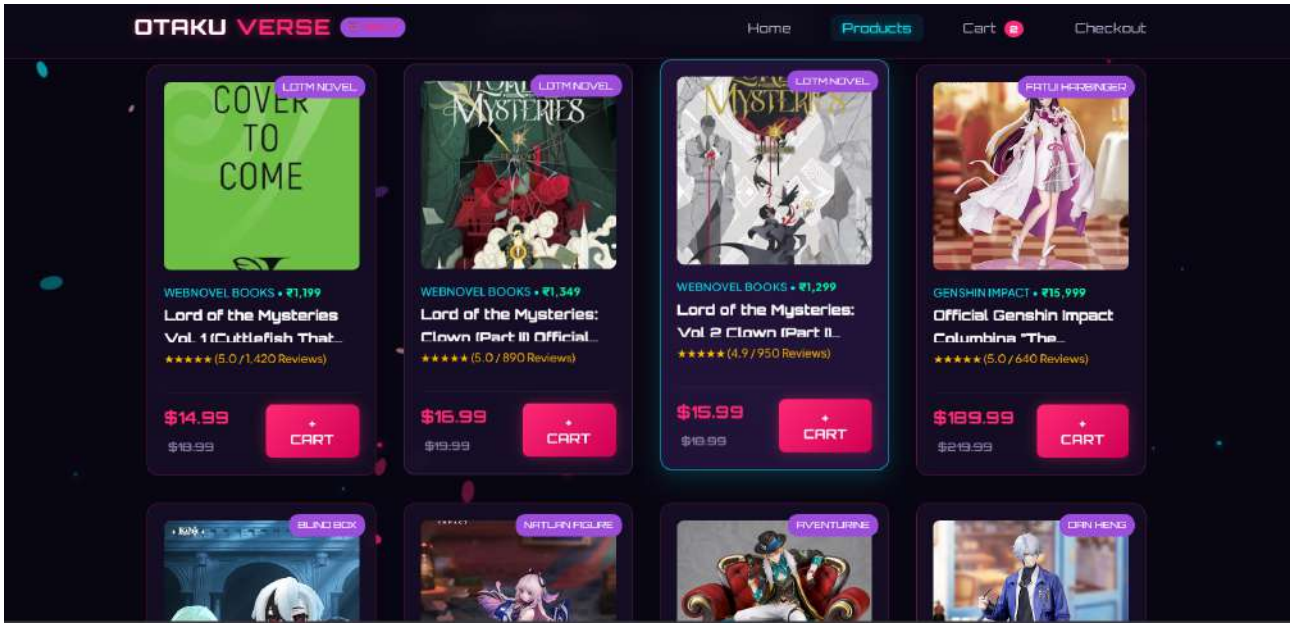

Below are screenshots of the deployed storefront (theme: OtakuVerse) demonstrating each required page working end-to-end with the navbar, styling, and responsive card layout applied.

1. Home Page (index.html)

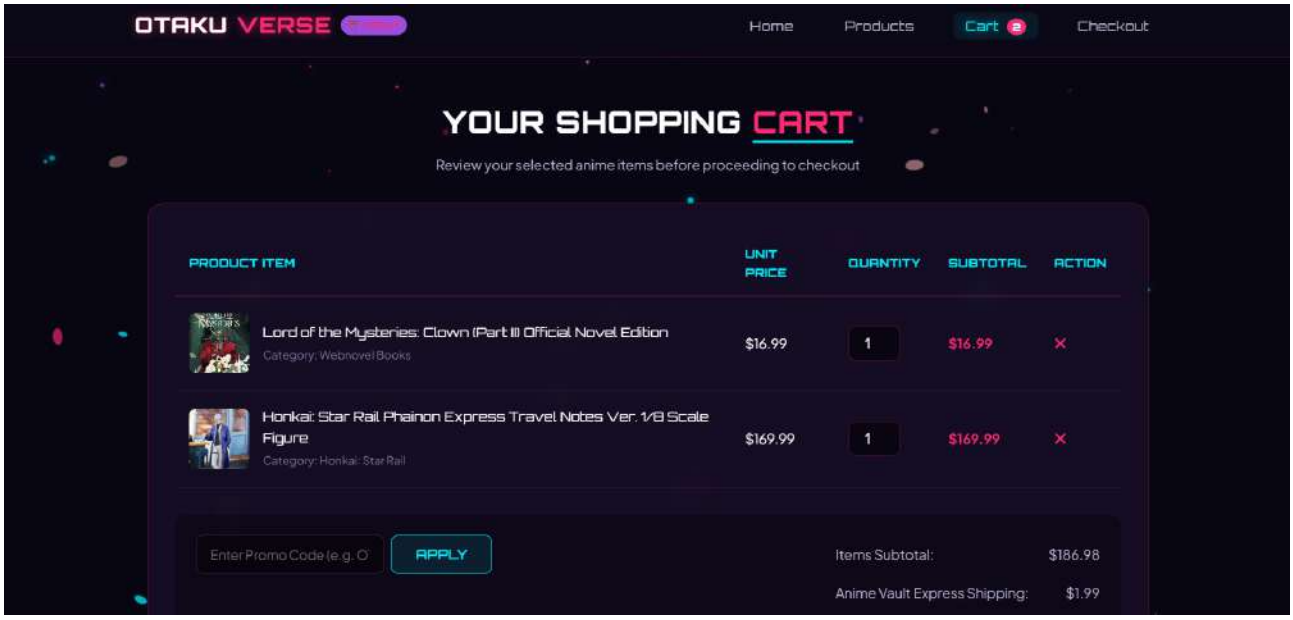

Header with logo & nav, hero/banner section with call-to-action buttons, and the start of the Featured Products section — built with the custom color theme.

2. Products Page (products.html)

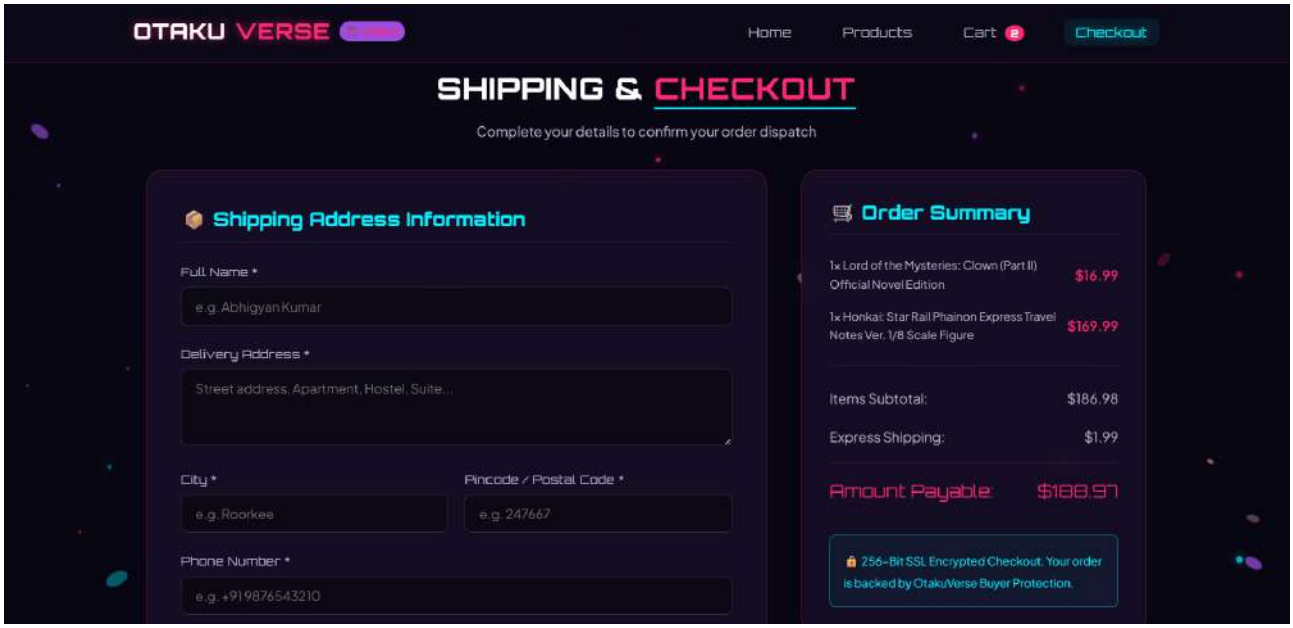

Product listing grid with 8+ cards, each showing image, category badge, name, star rating, price (with strikethrough MRP) and an Add to Cart button, wrapped responsively using CSS Grid/Flexbox.

3. Cart Page (cart.html)

Cart table showing product item, unit price, quantity, subtotal and action column, along with a promo code field and items subtotal in the order summary.

4. Checkout Page (checkout.html)

Checkout form with Full Name, Delivery Address, City, Pincode and Phone Number fields, styled with consistent input sizing and focus states, alongside a live Order Summary panel.
